Do not touch pills with your hands.

(There is no protective coating over the pills.)

~~~~~

Place 4 pellets in water bowl (about 1 cup of water), and let them dissolve.
It is preferable to use distilled water, but any water will work.

~~~~~

Give the animal unrestricted accesses to the remedy water. If they drink the
water gone, prepare another solution for them.
Make fresh remedy water for them every day.
Feed normally.

Put out non-remedy water for them to satisfy their thirst.

Animals will take as much of the water as they need, other pets that don't
need the remedy stay away from the water.

~~~~~

Keep remedy water available for 48 hours after symptoms are gone.

~~~~~

Store remedies at room temperature, in a dark place. High heat (like a hot
car on a summer day) may inactivate the remedy. **You have more remedy
in the packet than you will need for this round of treatment.**

~~~~~

Email or call the office 72 hrs after you finish the treatment plan.
